KELAMBAKKAM

Where learning has a purpose

Computing and debating skills!!

An Inner-Outer Circle Debate Strategy was emphasized upon as the 4th Graders lend their ears to others' views and put together an essay based on their opinions. This debate session helped nurture their oratorical skills as they contemplated multiple views and were prompt at expressing their personal opinions on controversial issues governing technology.

In search of paleontological treasures

The Jr.KG archeologists were busy digging their way through the school sandbox in the anticipation of finding the remains of a T-Rex or an Allosaurus. And guess what? They found the delicate fossilized bones of the magnificent King of extinction. Laden with brushes and plastic chisels these little paleontologists were determined to find all the bone of the mighty Dinosaur. And that's exactly what they did!

The Dancers of BHIS-K

Here are our second Graders dancing to the tunes of Natyatharagai Kiruthika, the school dance teacher. She has etched quite a few classical dancers who have done their Arangetram. Tap them young says the teacher and we see them grooming to be one.

Project "Shop Shop"

"Math is all around us, it is everywhere we go". To give meaning to this adage, Fifth graders set up their own shop to run their retail business. A basic understanding of commercial terms like profit and loss emerged through this project. Business decisions about the material cost, how to set up a shop, advertise, run a shop and record the data kept the students curious and excited.

Decimal War

The fourth graders had fun playing a breezy decimal war card game. This math game was to reinforce the concept of decimals to the tenths. Working in pairs, the students systematically outwitted each other till the player with the most number of cards was declared the winner.

Oral Hygiene for Nursery

BHIS-K has decided to set the standards of good oral hygiene early to keep our student's teeth healthy for a lifetime. Our professional in house dentist provided the nursery children with expert tips on how to take care of their teeth and keep cavities at bay. He demonstrated the right way to brush their teeth and highlighted how eating habits played a pivotal role in oral hygiene.

Expert Talk

Proficient educationalists from Maldives visited our campus as they interacted with our teachers and students. Ms. Meenal Bakshi and Mr. Dinesh Bakshi were pepped up by the atmosphere of our school and were seen exploring our classrooms. Adding in his inputs during an expert talk with the teachers, Mr. Dinesh suggested various technological additions in classrooms to make teaching more student-centric and productive.

A Guest lecturer joins ICT class!

The 5th graders were in for a surprise when they found out that their Residential Manager Mr. Jilson was joining them for an interactive discussion on Operating Systems. This session provided access to another perspective and thereby helped add variety to the classroom routine. A unique way to jazz up their revision sessions.

RESIDENTIAL HIGHLIGHTS

Afterschool Artists

The residential students were actively involved in craft lessons as they learned to craft some birds out of paper. These paper birdies were seen gliding the sky as the school boarders were engaged in some sporting activities.

Counseling their way to success

Our in-house counselor Ms. Krisheela had conducted a one-on-one counseling session with our residential students. This counseling was designed to help facilitate behavioural improvement, academic achievement and equip the students to develop socially. This was followed by a small group counseling session that helped the children to empathize with each other and discover social support through healthy peer relationships.
