Puppet Show

"The puppet show of our life is dependent on strings of different relations. Somewhere, sometime you need them to make a move in life" - Leena Khandait

This week, our little toddlers of Kindergarten were treated to a fascinating world of the deep ocean through puppetry. The young faces illuminated as their teachers brought out the puppets to enact the story of 'The Little Mermaid'. As the versatile facilitators moved their arms and mouths backstage to animate the story, their gestures brought life to the inert puppets. The story adapted from the original Disney Movie is about a pretty little mermaid who was the youngest daughter of the king of the sea. The mermaid was always dreaming about what life would be like on land. Determined to see how life is above the surface, she seeks her father's permission to explore. Paying little heed to her father's advice to not stray far away, the little mermaid gets excited with the bustling life above the surface of the water. The chirping birds, blazing sun and the scenic views enthrall her and she soon loses track of time. She falls prey to a casting net and is trapped. Her friends rush back to tell her father and bring help to free her from the vicious clutches of the net. All is well as she understands the importance of listening to the advice of her parents/elders. She also learns about the strong bonds of friendship. The puppetry held the toddlers in rapt attention as they were actively involved in the learning process by comprehending the valuable morals for life. This innate interactivity stimulated kids' imaginations as they showed a willingness to learn while having fun. The puppet show served as a gateway to opening up their minds and inviting knowledge in.

Mapping your thoughts

The 6th graders put their heads together and created mind maps related to newspapers, money, and irrigation to understand the importance of its invention in today's world. This group activity paved the way for learning about the great inventions made by the Chinese and their impact on the progress of the world.

Angle Manipulator

Our fifth graders had an interesting introduction to the world of angles with a hands-on activity. Every student armed with a pair of geo strips demonstrated angles using the given strips fastened together at one end. The strip on top was rotated to reveal an angle. The fun exercise enabled the learners to recognize angles in terms of rotation and also helped them to identify the name of the angle.

A Bubbling Experiment

Acidity and alkalinity are one of the major chemical properties of soil. It directly affects the type of plants that can survive in the soil as it plays a role in determining the availability of nutrients for the plants. With this in mind, our 5th graders set out to identify if different soil samples were acidic, alkaline or basic. They used vinegar and baking soda as indicators to identify the pH of the soil samples.

Exploring texture

The 5th graders after learning about the properties of the soil went on to identify the various types of soil found around their school and classified them into different types based on texture and colour. They also brainstormed the reason behind the difference and concluded that nutrients and the varying decomposed materials played an important role in it.

Share your Knowledge

Shubhansh of Grade 5 was seen enthusiastically explaining his classmate and teacher the properties of alluvial soil. This session was an ideal example of a flipped classroom as the students got the chance to flaunt their researching and teaching skills.

जल प्रदूषण

छात्रों ने जल प्रदूषण के बारे में सीखा । जल प्रदूषण कैसे होता है। जल प्रदूषण को कारण जलीय जीवों को क्या - क्या सहना पड़ता है । इन्सान जल को कैसे प्रदूषित करता है। हमें जल के प्रदूषण को रोकने के लिए क्या - क्या उपाय करने चाहिए । छात्रों ने पोस्टर के माध्यम से सामूहिक कार्य करना भी सीखा ।

Hall of fame

From day one BHIS-K has always aimed to provide quality education that is creative and unique thereby keeping up to our mission- To provide Education and not just literacy. This effort was recognized and our school was awarded "Excellence in Creative Learning Programme" by EL-DROK during the India K-12 Summit held on 16th October 2019.

What would happen if you woke up one day and found that all your mobile apps didn't work anymore? That's exactly what we are going to find out this Annual Day . Presenting to you the poster of "An appsworld@billabong.com" a dance drama like never before !!!
